Program overview

There is a trainer for every 1-3 trainees, and training models consist of didactic teaching, hands-on training, online conference. The training program includes didactic instruction regarding instruments and accessories, indications and contraindications of ERCP, diagnostic and therapeutic techniques, appropriate use of peri-ERCP medication, ERCP-induced complications and management, and short-term and long-term outcomes.

The program also includes adequate direct experience to allow the doctor to successfully complete a majority of diagnostic and therapeutic procedures in 4 months. After completion of advanced endoscopic procedures, the trainees are required to follow the patients until discharge.
